Ahmad Naeem

Senior Software Engineer | Full-Stack & React Native

mankhokhar1@gmail.com | linkedin.com/in/ahmadnaeemk | github.com/AhmadNaeemK | Lahore, Pakistan

SUMMARY

Senior full-stack engineer with 5+ years of experience taking mobile and web products for US startups from idea to production. Works directly with clients and product teams as their technical point of contact, shaping scope, trade-offs and architecture so the right product ships. AI-first engineer who designs orchestrated, rules-based agent workflows that plan, build, test and review code under human review gates.

EXPERIENCE

Senior Software Engineer, Arbisoft Jul 2024 - Present

- Architected an orchestrated, rules-based AI development harness in Claude Code (first built in Cursor), in which an orchestrator runs planner, builder, verifier, test-engineer, reviewer, review-resolver and debugger agents through gated plan, build, test and commit steps, guided by team rules and 10 slash commands.
- Led web and mobile products for US startups as lead developer and client-facing technical contact on Gumdrop, Lola and Crush, turning client requirements into technical plans and releases.
- Shipped four React Native apps to the App Store and Google Play, plus a Next.js and Django SaaS product.
- Set up testing, CI/CD and code review workflows on Lola and Gumdrop, and mentored a trainee developer on the Lola team.

Software Engineer, Arbisoft Jul 2021 - Jul 2024

- Built and released React Native apps for US startup clients, and was promoted to Senior Software Engineer in Jul 2024.

SELECTED PROJECTS (ARBISOFT)

Gumdrop: AI-powered meeting scheduling and analytics platform
Full-Stack Engineer | Jun 2025 - Present

- Built an internal LLM prompt-testing tool for models, agents, prompts and transcripts, with live WebSocket results.
- Built a contacts CRM with AI meeting notes and meeting history, plus infinite scrolling, bulk actions, inline editing and optimistic updates.
- Integrated Stripe subscription billing end to end (Checkout, Billing Portal, free trials with or without a card, entitlement checks), and made its webhooks safe against duplicate and out-of-order delivery with a unique-keyed event ledger, background processing after each commit and fresh subscription reads from Stripe.
- Developed group scheduling polls end to end, from host and attendee voting grids to booking the chosen time.
- Defined a typed Segment and Amplitude event catalog with source attribution and server-side subscription events, and built Amplitude dashboards on it to track product usage and the sign-up funnel.
- Secured the Zoom integration with webhook signature verification and handling for users who remove the app from Zoom.
- Fixed out-of-memory CI crashes, cut test time from 30 to 6 minutes with sharding, and added Playwright E2E tests.
- Led the dashboard, navigation and onboarding redesign, and removed 51K lines of code left behind by retired features.

Tech: Next.js, React, TypeScript, TanStack Query, Material UI, Django, Celery, Stripe, AWS

Lola: dating app built around post-date feedback
Frontend Lead, team of four | Apr 2023 - Apr 2025

- Architected the app's foundation with Redux Toolkit, React Navigation and an Axios layer that re-fetches an expired CSRF token and replays the request, and later added coalescing of concurrent identical requests.
- Built real-time chat over Server-Sent Events with typing indicators and contact sharing, plus in-app and push notification handling.
- Developed Firebase phone sign-up, multi-step onboarding and the date-planning flow, from swiping through prospects to picking and rescheduling dates.
- Integrated Survicate in-app surveys and reworked the post-date feedback survey at the core of the product, adding a new confirmation flow and reschedule reasons.

- Set up CodePush over-the-air updates with a forced-update check, and integrated Segment, Amplitude, Branch.io and Crashlytics for analytics, attribution and crash reporting.
- Developed audit-logged admin tools in the Go (Golang) and gRPC backend and the Vue admin console, so support could correct user details without engineering help.
- Launched on the App Store and Google Play in 2023 and managed every later release, backed by Jest tests, GitHub Actions CI and pre-commit linting.

  Tech: React Native, TypeScript, Redux Toolkit, Firebase, Go, gRPC, Vue

Crush: anonymous matching with people in your phone contacts
Sole Developer | Oct 2023 - Jul 2024

- Shipped the iOS and Android app as sole developer, building the core product in two months and shipping three releases.
- Wrote the matching logic as TypeScript Firebase Cloud Functions: a Firestore trigger detects mutual likes and sends push notifications to both users, and an Auth trigger removes a user's data when they delete their account.
- Implemented phone sign-up and contact syncing with phone-number normalization, so users match however a number is saved.
- Optimized long contact lists with fixed item layouts, fewer re-renders and an alphabet index, and added Crashlytics crash reporting.

  Tech: React Native, TypeScript, Redux Toolkit, Firebase Cloud Functions, Node.js

FunContact: React Native app for creating QR codes to share contact details
Main Developer | Mar 2022 - Mar 2025

- Developed QR code creation for contact details such as name, email, phone, address and social profiles, starting from initial project setup.
- Maintained the app and released it on the App Store and Google Play.

Reki TV: React Native social recommendations app for movies and shows
Mobile Developer | May 2022 - Dec 2024

- Built features for friends' recommendation lists, including comments, sharing and saving to your own list.
- Added screen animations and split large screens into smaller components to cut unnecessary re-renders.

SKILLS

Languages: TypeScript, JavaScript, Python, Go (Golang), SQL, HTML5, CSS3

Frameworks & Libraries: React Native, Expo, React, Next.js, Node.js, Vue, Tailwind CSS, Django, Django REST Framework, Celery, Redux Toolkit, TanStack Query, Zustand, Material UI (MUI)

APIs & Integrations: REST APIs, gRPC, WebSockets, Server-Sent Events, OAuth, Stripe, Segment, Amplitude, Branch.io, Push Notifications

Testing: Jest, Vitest, React Testing Library, Playwright (E2E), pytest

Cloud & Data: Firebase, Cloud Functions, Firestore, Firebase Cloud Messaging (FCM), AWS, Amazon S3, CloudFront, PostgreSQL, Redis

Tools & Practices: Code Review, CI/CD, GitHub Actions, Git, Docker, Agile, Scrum, App Store Connect, Google Play Console, Claude Code, Cursor, Jira

EDUCATION

National University of Sciences and Technology (NUST), Islamabad, Pakistan Sep 2017 - Jul 2021
Bachelor of Engineering in Software Engineering (BESE), School of Electrical Engineering and Computer Science (SEECS)
